These are very interesting and terrifying, and well worth reading about. The rest cover possible situations which, while fascinating and exciting, do broach the extremes of possible likelihood. If you imagine the world will likely go on as it is barring some extremely unlikely calamity, then you may want to pass on this one - however as a thought exercise it is compelling.0 of 0 people found the following review helpful. Information could be interesting, but terrible writingBy Damian ConnollyWhile the source information inside might be interesting, the book itself is horribly written; the target audience is, I guess, a man-baby. Did the sentence contain a reference to beards, beer, bacon, balls, or any number of unnecessary adjectives? If not, rewrite. A real struggle to read, which is a shame, because the subject matter has so much potential

Just when you thought youd accepted your own mortality . . . Everything Is Going to Kill Everybody is bringing panic back. Twenty illustrated, hilariously fear-inducing essays reveal the chilling and very real experiments, dangerous emerging technologies, and terrifying natural disasters that soon couldor very nearly already didbring about the end of humanity. In short, everything in here will kill you and everyone you love. At any moment. And nobodys told you about ituntil now: Experiments in green energy like the HiPER, which uses massive lasers to create a tiny contained sun; its an idea that could save the world if it doesnt consume us all in a fiery fusion reaction first. Global disasters like the hypercana hurricane so large it could cover all of North America and shoot trailer parks into space! Terrifying new developments in robotics like the EATR, which powers itself on meatan invention in the running for Worst Decision Made by Anybody.

A bold, terrifying read that goes down smooth thanks to a crisp infusion of humor. Thanks to this book, I can now aspire to dying in cooler ways than I ever thought possible. F**k you, old age. Im holding out for a megatsunami. Daniel H. Wilson, author of How To Survive a Robot UprisingThe book is proof that the ridiculous and the horrible are joined at the hip and will never be separated; in a universe that seems to continually be thinking up new ways to kill us, Brockway knows there is but one rational response: to point at it and laugh. David Wong, author of John Dies at the EndThere has never been a hipper Prophet of Doom. Irreverently entertaining and terrifyingly accurate, the probability of our future death has never been more fun. Michael Largo, author of Final Exits: The Illustrated Encyclopedia of How We DieThis book is hilarious. As if I wasn't already afraid the leave the house. What's that? Brockway suggests the apocalypse doesn't knock? What if I cower under a desk? Well, damn. I might as well have another nacho.
